SWAT MR. FLY RIGHT NOW BEFORE HE IS A PARENT

This You Will Prevent Propagation of Evil Disease Spreaders.

The torpid, lazy-moving insects are beginning to emerge from their winter quarters. They are to be the progenitors And we're sacrificing stock of trillions of epidemic makers. The menace which annually faces mankind rather than move it to the new through the activity of these distributers of germs and disease may be reduced, but only through the striking of a tell-

ing blow at the insects before they have

had a chance to develop. District of Columbia health department officials are anxious that Washingtonians shall begin an early warfare on the fly this year. They believe that the health of the capital may be wonderfully benefited if this is done. One fly destroyed now, it has been estimated, will prevent the development of more than five

billion before the end of summer. One Fly Is Dangerous.

The wonderful reproductive capacity of this breeder of pestilence is the reason advanced why householders not only of Washington, but of every municipality, should begin an immediate fly-swatting campaign. A solitary fly in April may for toning up the system. 25c seem a harmless thing, but, if left undisturbed, it may cause an entire comnunity to be gripped by pestilence. Health experts are beginning to realize that if flies are to be destroyed they must be attacked when they are least | able to combat their natural enemies, and this is in the early spring, when food

is scarce. The close relation of clean-up campaigns to the fly-exterminating propagan-da has begun to be appreciated, and for thiis reason many municipalities already have commenced or are preparing for sanitary crusades. It has been demonstrated that the more filth that is removed from a city the greater difficulty is placed in the way of the development of the insect disease spreaders.

Clean-Up in New York.

New York city already has started by flies this summer than ever before. In the flood-swept towns and cities of the Ohio valley, where tons of filth have collected, a real menace exists in the opportunities afforded for the development of flies. The health authorities of those ommunities are preparing to combat the

danger as best they may. Washington will have another organized fly war this year, to be waged under the auspices of The Star and the supervision of the District health department Plans for the crusade now are being formulated, but in the meantime, it is pointed out, householders should not fail to swat the solitary insects as fast as they crawl out of their places of hibernation. April flies drone around, easy targets for an alert housewife. Their extermination on a large scale would usher in a new era of health in the capital, it is believed.

BIG DECREASE IN PRODUCTION. Stocks on Hand in February of News

Print Paper Also Smaller.

A heavy decrease in the production of news print paper, with a small decrease in stocks on hand, is the feature of the February statistics of the American Paper and Pulp Association, as filed with the commissioner of corporations. The production was but 92 per cent of the computed normal (full capacity). The total for the month was 94,786 tons, a decrease of 14,878 tons from January. This was largely due to the fact that there were only twenty-four working days in February, against One of the largest stock Mantels on display and assortments of Mantels in Washfagton. Exclusive work of this kind enables us to better work for less money. Ph. N. 7828.

EDWIN E. ELLETT. 1106 9th N.W.

Production in February 1912, was 100.the fact that the February returns cover Production in February, 1912, was 100,-

714 tons. The average daily output in February, 1913, was 3,949 tons, or 113 tons less than in January. Shipments for the month were 95,664 tons, a decrease of 14,920 tons from January. The excess of shipments over roduction caused a decrease of 840 tons in stocks, which at the end of February were 37,834 tons.

Importations of news print paper amounted to 12,669 tons, of which 11,209 ons came in free of duty. Other grades of paper, as a rule showed moderate decreases in production and shipments, while stocks remained practically stationary. A good demand for these other grades was, however, reported, with the exception

LAUNCH AGAIN IN SERVICE.

Relee of U. S. Engineers' Fleet Repaired-Lighter Completed. After having received a general over-

hauling and painting, the launch Relee, belonging to the United States Army en gineer's office, this city, has gone into service. The launch is the smallest of the engineer's office here and is used by Inspector Avrill in his visits to points about the harbor where work under the supervision of the engineer's office is in

A new lighter, the second to be built on the Potomac Park wall for the engineer's office, is practically completed and within the next day or two will be shoved built under the supervision of the engineer officials, is about 40 feet long, 16 feet beam and of light draft. It is to be used in connection with the snagboat York in her operations in removing obstructions from the navigable streams that empty into Chesapeake bay on the western shore of Virginia. It is probable the York and two lighters will leave here for the Mattaponi and Pamunkey rivers the latter part of this month.

WARREN IN SERVICE AGAIN.

After a lay-up of several days to have her boiler overhauled the District tug Genand left here yesterday with a tow of trict workhouse at Occoquan. It is re-

The Warren was formerly the tug son river. She is a vessel of thirty-eight gross tons and is seventy-two feet two inches long. She was built at Peekskill, N. Y., in 1888 and for many years was employed in the army engineer's office service on the Potomac. When she was replaced in that service by the large tug Castle, about two years ago, she was authorities. In the past year considerable trouble has been experienced with her boiler and she has been forced to lay up several times for repair work.

UNDER NEW RULING.

increased carrying capacity on life rafts in the equipment of steam vessels employed in traffic on the inland waters of the United States, the steamers employed in excursion traffic on the river will not be compelled to have as much of this class of life-saving equipment as has been required by recent inspections. Under the ruling mentioned but three cubic feet of air space is required for each person allowed to life ratts of the catamaran type, in place of four and a half feet, as was required under the old ruling and which is still required on ocean-going vessels. The new regulation allows thirteen persons to use a life raft Star Steamship Company that, following that was formerly figured to accomdate but eight.
